Risk Assessment Report

SUHADA water
(Food for specified health uses)

Food Safety Commission of Japan (FSCJ)
June 2014

ABSTRACT

FSCJ conducted a risk assessment of a food for specified health uses, “SUHADA water”, based on the documents submitted by the applicant. “SUHADA water” is a beverage containing glucosylceramides as the component relevant to its specified health use, and recommended for persons who tend to have dry skins.

A recommended daily intake of this food, 340 mL, contains 1.8 mg of glucosylceramides as the substance relevant to its specified use.

The data used in the assessment are on: the reverse mutation tests in microroganisms, chromosomal aberration tests using mammalian cells, a single gavage administration test in rats, 90-day repeated gavage administration test in rats, 12-week oral intakes test and 4-week three-fold excess intakes in human volunteers.

FSCJ concluded, from results of the above examinations and others, that “SUHADA water” has no risk to human health as long as the documents submitted by the applicant.
